## Dear Fellow Gardeners:

Your health and happiness—both may be found in a garden.

Have a garden, because it is good for you and it is fun.

Some people garden from necessity for food; all people did that at one time, but now many people have both vegetable and flower gardens for pleasure.

Did you ever think why certain things give you pleasure—things like fishing, hunting, riding horseback, walking through the country—or gardening?

It is because for thousands of years our ancestors had to do those things of necessity, and the natural impulse to do them is still in us and craves to be expressed.

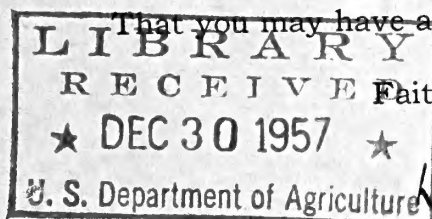

So, my friends, have a garden!

Gardening is the most undemanding of all recreations. It is challenging, but patient, and right at your door. Your plants will grow even while you sleep or go on a vacation. Some of them will live for four or five months over winter with no attention at all. But all of the plants in your garden will reward you for the attention you give them.

Civilization began in a garden, and today the peoples who have been civilized the longest are the best gardeners.

We could not live without gardens. Farms, of course, are merely an outgrowth of gardens. While some houses do not have a garden, every garden is apt to mean a happy home.

That you may have a good garden is my earnest wish.

Faithfully yours,

*David Burpee*

# BURPEE'S GIANT PANSIES

Pansies always have been a great specialty with us and we are justly proud of our strains. Their wide range of colors, markings and forms, their easy culture, have made Burpee pansies universally popular. Pansies succeed best in fairly rich, well-drained soil in a sunny position, and produce their finest flowers in the cool, early days of spring. Keep flowers picked during the summer, plants pinched back to produce new growth and flowers in early fall. Seeds may be sown outdoors when soil has become warm; for earlier blooms, start seed indoors or in a hotbed four to six weeks before your usual outdoor planting time.

## 4222 Floradale Giants Mixed

Burpee's outstanding strain of giant pansies developed over a period of years through breeding, close and careful selection. The range of colors is unusually large, including reds, yellows, blues, etc., the majority attractively blotched with contrasting shades. Many of the blooms are nicely waved and fluted. Plants are well-rounded and profuse bloomers. Unsurpassed blend.

Pkt. 75¢; 2 pkts. \$1.25; 1/16 oz. \$2.25; 1/8 oz. \$4.25

## 4359 Color Carnival Mixed

An excellent mixture of special merit. Flowers are very large, slightly waved, mostly blotched or have nicely blended colors on the petals. Plants are of uniform, compact habit of growth.

Pkt. 75¢; 2 pkts. \$1.25; 1/16 oz. \$2.25; 1/8 oz. \$4.25

## 3385 Coronation Gold—Yellow

*All-America Silver Medal Winner.* Canary-yellow with the lower petals flushed golden orange. Flowers grow 3 in. across, are round, with lightly ruffled edges and have a mild, spicy scent. Highly prized for cutting; effective in borders and edgings alone or in combination with Swiss Blue. Lovely pansy of charming form and beauty; the texture of the flowers is very substantial.

Pkt. 40¢; 2 pkts. 75¢; 1/16 oz. \$1.35; 1/8 oz. \$2.50

## 3353 Oregon Giants Mixed

Extra long stemmed, giant, fragrant flowers, the petals gracefully waved and ruffled at the edge. A wonderful range of choice colors, especially rich in light colors—light blue, yellow, red and shades of raspberry, lavender and purple with many nicely blotched. Early.

Pkt. 50¢; 2 pkts. 95¢; 1/16 oz. \$1.75; 1/8 oz. \$3.25

## 4237 Steele's® Jumbo Mixed

Immense flowers in a well-balanced color blend of blue, purple, bronze, yellow, red and primrose shades; in addition to multi-color combinations, and some beautifully blotched or bordered. White, bronze shades and lavender in limited quantities. Plants bloom early and bear profusely throughout a long season. Stems are long and strong. Superb blend of many unusual colors.

Pkt. 75¢; 2 pkts. \$1.25; 1/16 oz. \$2.25; 1/8 oz. \$4.25

## 4204 Burpee Blend of Giant Fancy Pansies

A carefully prepared mixture of the highest quality. Plants are selected for their vigor and the way they hold their flowers above the foliage; blooms are very large, many waved, some with crinkled edges. Colors are beautiful and varied, including many that are very interestingly blotched with contrasting shades.

Pkt. 35¢; 2 pkts. 65¢; 1/16 oz. \$1.25; 1/8 oz. \$2.25

## Trimardeau or Bedding Pansies

**4223 All Colors Mixed** Where color effect is more important than size of bloom, this mixture will be found highly desirable for beds, borders and edgings as plants are compact, extremely free blooming, of neat habit, and very hardy. Flowers are large, borne on strong, stiff stems long enough for cutting. Excellent blend of colors, some prettily blotched, others margined and variegated.

Pkt. 25¢; 1/16 oz. \$1.00; 1/8 oz. \$1.75

## Super Swiss Giant Pansies

**4225 Special Mixture** Largest flowers in all the vivid, rare and most outstanding shades of blue, purple, red, bronze, yellow and primrose. We have also included some of the five-blotched varieties that are so beautiful to further enhance the color assortment. The marvelous Swiss Pansies cannot be praised too highly. Most effective in beds and borders, and very desirable for cutting.

A wealth of color in the garden all summer and fall unequaled by any other flower. Easy to grow in ordinary garden loam but give the best results in a fairly rich medium one; be sure to plant in a sunny location. Remarkable diversity of flower forms; some resemble a chrysanthemum, others like a carnation or peony and some sponge-like and ball shaped. All are lovely for cutting, the flowers keeping in fine condition for a long time.

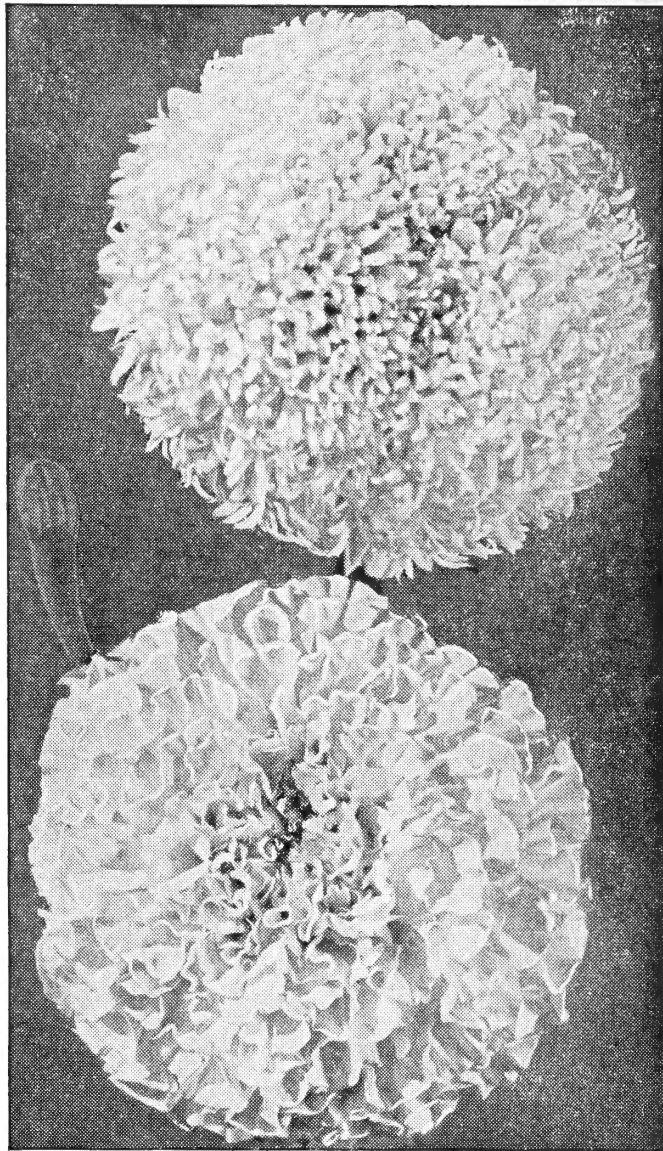

1957 Judging of "White Marigold" Trials at Floradale Farms was done on August 13th. The judges from the left are Dr. Vernon T. Stoutemyer, Chairman of the Department of Floriculture and Ornamental Horticulture, University of California; David Burpee, President, W. Atlee Burpee Co.; and Dr. John G. Seeley, Head of Department of Floriculture and Ornamental Horticulture, Cornell University.

## \$10,000 for a White Marigold

Burpee will pay you \$10,000 if you are the first person who sends us seeds that grow the first White Marigold as big as Man-in-the-Moon Marigold, and as white as Snowstorm Petunia. It must be understood that you will not give or sell White Marigold seeds to anyone else, and that all seeds sent to us become the property of W. Atlee Burpee Co., with the exclusive rights to name, introduce and sell, and no seeds can be returned.

If you find a pure white marigold, do not cut the flowers but let them go to seed and send about 100 seeds to us at Philadelphia 32, Pa., Clinton, Iowa, or Riverside, California. We will plant the marigold seeds on our Floradale Farms and the results will be judged by the President of the W. Atlee Burpee Co. and two other distinguished horticulturists. The decision of the majority of the judges will be final, and the results will be announced in our seed catalogs.

In this world-wide search for a pure white marigold, anyone, anywhere, may submit seeds except Burpee employees or their families. It is understood that all seeds submitted for trial are accepted by us only under the above conditions.

# THE FIRST GIANT F, HYBRID MARIGOLDS

## Climax

NEW FOR 1958

Climax Marigolds are by far the most gorgeous marigolds we have ever seen and, we believe, aptly named as they are the climax of 20 years of Burpee research to create giant African F<sub>1</sub> Hybrid Marigolds with all the virtues of a perfect flower. The tremendous, almost globular, blooms reach sizes up to 5 in. across and nearly as deep. While of giant size, the fully double flowers have unusual grace and charm for the satiny petals are deeply ruffled and frilled. The tall plants, 2½ to 3 ft. high, bear an abundance of flowers, all of them large, on long, graceful, cutting stems from midsummer until frost. Climax is available in two separate colors, a clear, bright yellow and a deep, brilliant orange.

After many Burpee firsts in creating new marigolds—the tetras, marigolds with odorless foliage, the French-African F<sub>1</sub> Hybrids, to say nothing of dozens of new varieties, both giant and dwarf, Climax Marigolds overshadow all other achievements in breeding new marigolds.

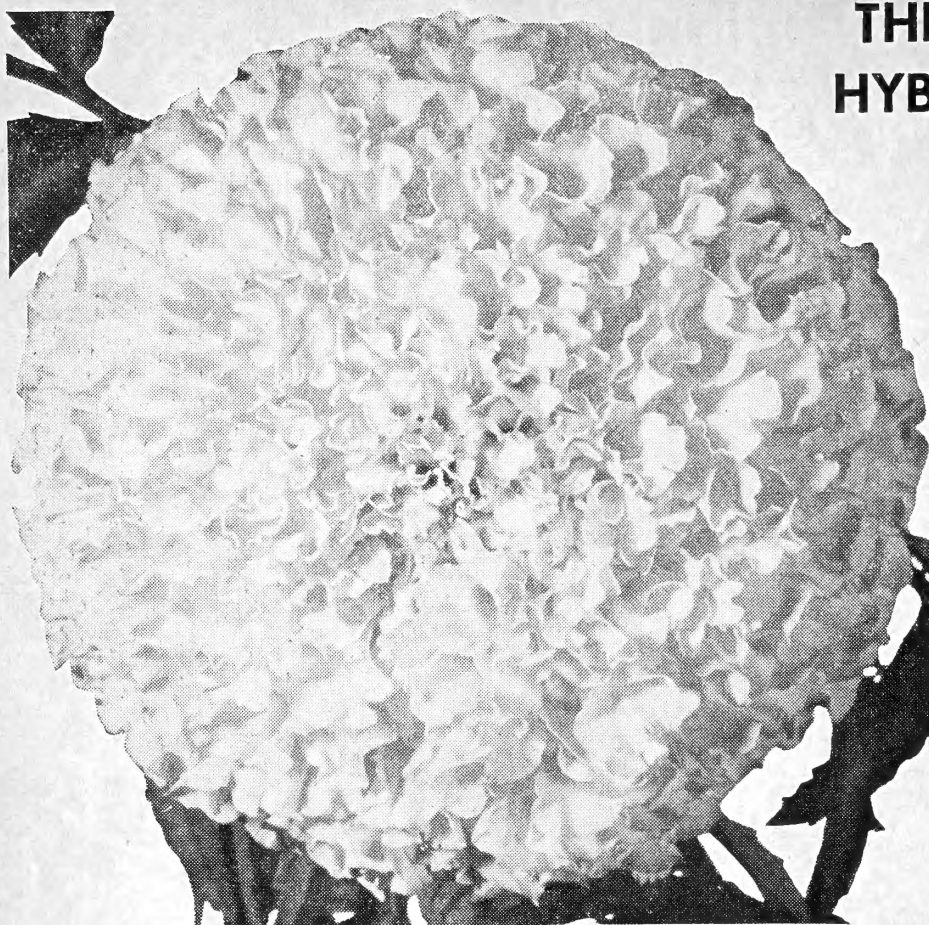

**4443 Yellow Climax** Bright yellow.

**4442 Orange Climax** Deep orange.

## 4154 Burpee's Red and Gold Hybrid Marigolds

DOUBLE SPECIES HYBRIDS BETWEEN AFRICAN AND FRENCH MARIGOLDS

*Award of Merit, Royal Horticultural Society of Great Britain.* Flowers of Burpee's Red and Gold Hybrids are exceedingly double, 2½ to 3 in. across, some are solid red while others are delightful combinations of red and gold. Color varies with the season—at times it becomes almost pure golden yellow and at other times a bright, rich mahogany-scarlet. The bushy, upright plants grow up to 2½ ft. tall, 2 ft. wide. They flower in 8 weeks from seed and continue to bear profusely and continuously until the plants are killed by frost. Especially suited for borders and beds; prized for cut flowers and exhibition. Good keepers.

Burpee's Red and Gold Marigolds are hybrids between the African and French Marigolds and for this reason a few African Marigolds of an orange color may appear in any planting. These African Marigolds can be distinguished from the hybrids before the plants are ½ in. high by the green color of their stems; the hybrids have red stems. If any plants with green stems appear in your planting, we suggest that you transplant them to a separate location. They usually grow taller than the hybrids, more bushy and with larger flowers.

# EVERLASTINGS, STRAWFLOWERS AND GOURDS

With the exception of Job's Tears, *Briza maxima*, Gourds and Honesty, the varieties listed on this page are desirable for use as fresh cut flowers, and largely grown to dry for winter bouquets. Job's Tears is an annual grass grown for its grayish white seeds which are strung as beads. *Briza maxima* holds its panicles when dried and may be used alone or with dried flowers. Gourd fruits, when dried, are used for ornaments. Honesty is prized for its satiny, parchment-like partitions of the dried seed pods. The best method to dry the flowers and *Briza maxima* grass is to cut the material before it is fully developed, remove foliage, bunch loosely, and hang head downward in a cool, airy, shady place. The flowers of *Celosia* (Cockscomb), page 18, also last a long time if dried as you would everlastings. Flowers should be fresh and free from water. Dry them slowly and never over artificial heat.

# Burpee's Tetra Snaps

## Giant Ruffled Tetraploid Snapdragons

ALL ORIGINATED ON BURPEE'S FLORADALE FARMS

Tetra snaps are a Burpee scientific creation, originated through the treatment of the best regular or diploid varieties with colchicine—a drug or chemical derived from the bulbs of fall crocus. Genetically, they are known as tetraploids, for, when examined under the microscope, they have twice the number of chromosomes in their cells as the regular or diploid snapdragons.

Burpee's Giant Tetra Snapdragons are extremely large and attractively ruffled. Plants are exceptionally strong and husky, with glossy, dark green foliage, thick and almost leathery in texture; the stems are quite heavy. Under general field conditions the central spikes grow 2 ft. and more in height; these are surrounded by lateral spikes of lesser height. Base branching plants. Tetra Snaps are wonderful for cutting.

**3495 Tetra Candlelight** Clear, bright yellow, nicely formed, well placed flowers are freely borne on strong, erect spikes. Extremely rich and beautiful.

**4267 Tetra Crimson** Very large, deep but bright, velvety crimson flowers closely set on long, broad, tapering spikes above dark green, thick foliage.

**4269 Tetra Pink Shades** Exquisite variations from shell-pink to deep rose. The tapering spikes are filled with large, nicely formed, well placed flowers.

**3499 Tetra Shades of Rose** Especially selected for those who prefer the clearer, deeper shades of rose for their garden. A most appealing blend.

**4258 Tetra White** Creamy white changing to pure white with age; primrose throat which adds to the beauty of the large, attractively formed flowers.

## SNAPDRAGONS

These exquisite flowers have always been universal favorites for color in the garden, in the greenhouse during the winter, and as cut flowers. Of easiest culture, succeeding best in rich or moderately rich soil—in full sun or semi-shade. The gorgeous flowers are freely produced for several months, and until frost where conditions are favorable. Sow seed outdoors when soil has become quite warm; for earlier blooms sow the seed indoors six weeks before your regular outdoor planting time, and transplant the seedlings when the soil has become warm.

## SCARLET SAGE or SALVIA

Scarlet Sage is one of the most brilliant bedding plants, blooms from early summer until frost. Popular for beds, borders, edgings and pot culture; may be used for cutting. There are tall and dwarf varieties for different purposes. All are best treated as annuals but seed must be started early indoors in boxes of light, rich soil so as to have plants large enough to set in the ground outdoors when weather and soil have become thoroughly warm. Blue salvias are distinct from the scarlet being less showy but fine for planting in borders and to mix with other cut flowers.

# Burpee's Giant Hybrid Zinnias

*First named and introduced by Burpee in 1951*

The loveliest flowers ever created. They include first and second generation hybrids, grow 5 in. and more across, with a pleasing variation in petal formation, many being of the informal ruffled type, some attractively curled, others gracefully quilled. The loosely arranged petals give the flowers an airy appearance, free of the stiffness of some other zinnia types.

Plants are strong, free blooming, 2½ to 3 ft. tall and ideal for garden decoration and cutting. In our opinion these beautiful flowers have been wrongly named "Cactus Flowered" or "Giant Fantasy." No matter what name you prefer, be sure to get your seed direct from Burpee—the originator.

Burpee's Giant Hybrid Zinnias have been Highly Commended by the Royal Horticultural Society of Great Britain.

**4426 Rosie O'Grady** **NEW THIS YEAR** This newest member of the family of Burpee's Giant Hybrid Zinnias is a distinctive bicolor with a deep rose center that shades toward the outer petals to a soft rose. The flowers are made up of attractively curled and twisted petals that are characteristic of the graceful, informal Burpee Hybrid Zinnias. A beautiful sight either in the garden or when they are cut.  
Pkt. 40¢; ⅛ oz. \$1.25; ¼ oz. \$2.00

**4075 Apricot** Glorious color in the much talked of Giant Hybrid Zinnias. Flowers are finely quilled like some chrysanthemums, double, symmetrical and of an attractive shade of coral suffused apricot. Wonderful for garden display and a highly desirable and appealing shade for cutting.

**4334 Blaze** *All-America Winner*. Bursts into bloom with a profusion of brilliant mandarin-red flowers and, as the flowers attain size, changes to an exciting fiery orange-scarlet. And the amazing thing is that for all its size and vivid color, it retains the grace and informality associated with Burpee's Giant Hybrids. Gorgeous when cut, alone or with others and equally striking in the garden.

**4375 Burpee Gold** Large delightful blooms of saffron or golden yellow; symmetrical and fully double. Most flowers have slightly curled petals, creased toward the tips, which gives a fluffy, informal appearance so popular in these new zinnias; some petals are broader than others.

**4331 Eskimo** Flowers are loosely ruffled, open creamy white and change to white as they mature. Petals are long and narrow, slightly turned and faintly notched at the tips.

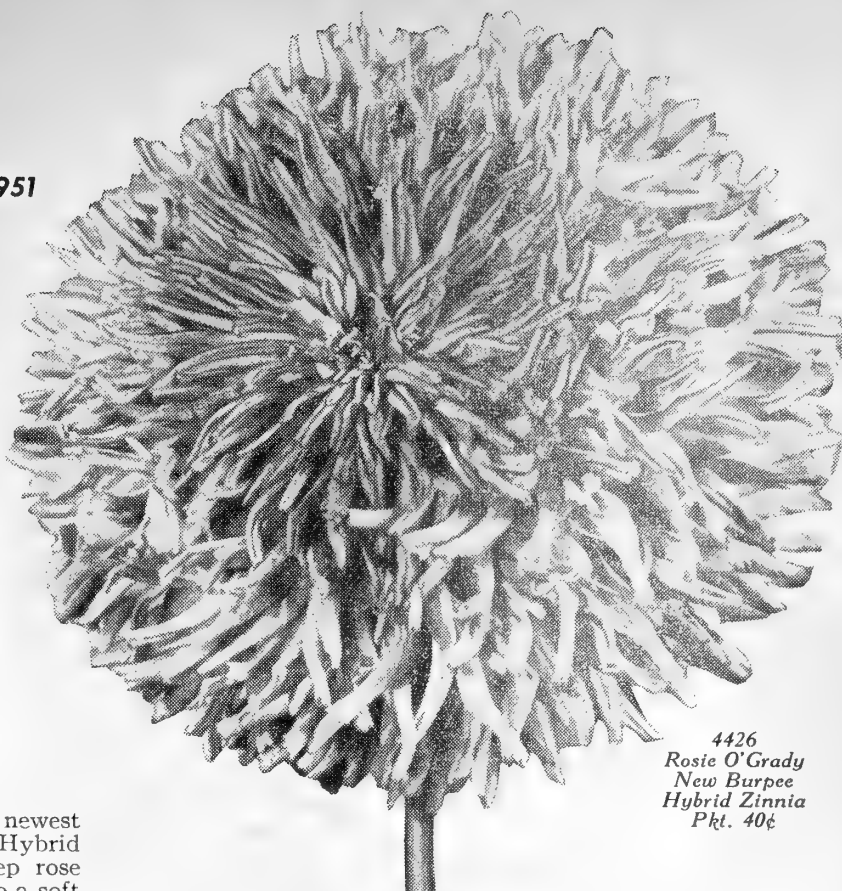

**4333 The New Flordale Scarlet** Vibrant scarlet-red flowers, made up of many ruffled and fluffed petals which curve under and twist gaily to create a deep flower of unusual grace and refinement. Perfect for bold accent plantings in annual and perennial gardens; prized for cutting. This strain is greatly improved in color and form.

**4301 Glamour Girls** Delightful mixture of the lighter shades of Burpee Hybrids. Included are buffy apricot, orange-apricot, chamois, orange suffused rose, salmon-pinks, soft rose shades, creamy yellows, salmon-cerise, cream, white and other soft, pastel shades and colors.

**4352 Kismet** A color entirely new to any type of zinnias, a gorgeous, radiant, Persian red. Flowers are highly double, attractive, and have the relaxing, informally quilled petals characteristic of many of the Burpee Hybrids. Kismet is very free blooming and will make a grand showing in your garden and you will get equal enjoyment from it as a cut flower to add brilliance to arrangements.

**4351 Rosalind** Distinctive new bicolor in the Burpee Giant Hybrid class. The large, exquisite flowers are bright rose pink shading to salmon-rose in the centers. The fluffy heads which have loosely ruffled to curled petals are borne on strong stems and make beautiful cut flowers.

**4305 Sunny Boy** Rich buttercup-yellow flowers made up of many delightfully ruffled petals alive with color and brilliancy. A planting of Sunny Boy Zinnia is attractive in the garden and the flowers wonderful when cut.

## 4323 All Colors Mixed Burpee Giant Hybrid Zinnias

New and better blend—many colors and showy color combinations never before seen in these or any other zinnias. Chinese corals, vermilion, soft shades of orange, unusual pinks, carmine-rose, saffron-yellows with pink on reverse of petals, fire reds changing to orange and many flowers with cream or yellow centers that give an unusual and effective two-tone effect. Shading of color on individual petals also gives interesting color tints not usually seen in zinnias. Their glistening beauty, stem length, and keeping quality make them one of the most popular of all cut flowers. Burpee Hybrid Zinnias are prized for exhibition purposes.

## Burpee's Giant Tetra Zinnias

Lovely warm colors from salmon-pink through rose-pink and cerise-rose to cherry red seem to take on extra richness from the thick, velvety petals that are large and loosely arranged. *We began experiments many years ago on the treatment of Zinnias with colchicine after introducing the first tetraploid annual, Tetra Marigold, 17 years ago when we coined the word Tetra. The second tetraploid annual, Tetra Snaps, was introduced by us in 1946. Now we offer this exciting new zinnia—Tetra Shades of Rose.*

Perennial flowers are the hardy, permanent ones that live for years. Plants grow to the flowering stage each year and die down again to the roots, which remain alive but dormant until the next season. Some perennials will flower the first year from seed if it is sown early, although two seasons are usually required before the plants produce their blooms. Sow seeds early so that you will have stronger plants to go through the winter and give more bloom the next spring and summer.

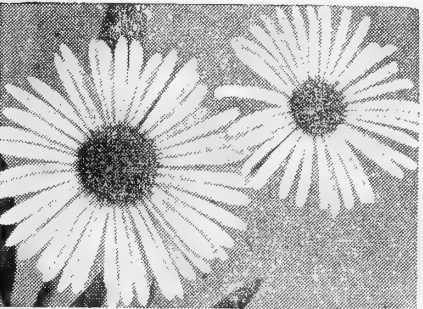

Cultural directions are given on every bag. With the perennials we have included the best of the biennials, seed of which is sown one year, the plants blooming the second season, after which they die.

# BURPEE'S Famous Vegetable Seeds

## GROW YOUR OWN VEGETABLES

The vegetables you grow, if used when they are in prime condition, will be fresher, taste better and contain more vitamins and minerals than those usually bought at the store. To enjoy the flavor of vegetables at their very best, they should be cooked as soon as possible after being picked. Many of the best vegetables were first introduced by Burpee.

Vegetable Seeds and Roots are Sent Prepaid anywhere in the U. S.

### Maturity Dates

The average number of days required from the time the seed is sown until vegetables are ready for use is given with each variety. Where plants must first be grown, such as Celery, Cabbage, Peppers, Tomatoes, etc., the number of days to maturity is from the time plants are set in the garden. Of course, the time is average, having been obtained over a period of years in our trial grounds under different conditions; some variation is to be expected, depending on the season, locality and time of sowing. The approximate maturity dates given will show the relative time when different varieties will be ready to use.

### Follow the Bull's Eye ☉

We have used this mark, ☉, for years to guide the gardener in the selection of vegetable varieties which we believe will give the best results under varied conditions of soil and climate. We have reprinted an old woodcut which appeared in early Burpee Seed catalogs, the forerunner of our present symbol. This mark, ☉, usually called a bull's eye, was used by the ancient alchemists to represent gold. It therefore is most appropriate for indicating the varieties which we consider the best of their class. If you are not thoroughly posted which varieties to choose for your section, we suggest you select those marked with the bull's eye.

The approximate maturity dates given will show the relative time when different varieties may be expected to be ready to use.

## Bush Lima Beans

Easier grown than pole limas as plants do not need support. There are varied sizes and shapes of beans to meet your preference, whether it be the large thick (Burpee's Fordhook) or small thick "potato" type (Baby Fordhook), the large flat (Burpee's Improved) or the small flat baby butter lima (Henderson Bush). Some prefer one type for eating fresh, another as dry beans or freezing. We list the best varieties for the purpose. A pkt. of large-seeded varieties will sow 15 ft. of row; one lb., 100 ft.; the small-seeded kinds will, of course, go much further.

## Bush Snap Beans

Before the introduction of stringless bush beans, green and yellow podded varieties were known as string beans and this name, unfortunately, seems to remain in many localities. # POLE BEANS

Young pods make delicious snap-shorts; also popular as green or dried shell beans. To many persons, pole beans have that good bean flavor that is lacking in some varieties of the bush type.

Pole beans come into bearing later than bush beans, yield more heavily over a longer period and some produce bigger pods. They do best if the vines, which grow 5 to 8 ft. and more high, are given support, the most frequently used being rough poles, although they may be planted 3 to 5 in. apart along a trellis or fence or along a series of strings on which they may be trained.

A pkt. of seed is enough for 15 poles; one lb. for 100 poles or 300 ft. of fence, trellis or string.

## Pole Lima Beans

Pole Limas mature somewhat later than bush limas and must be given support on which the vines may climb. The yield per sq. ft. of garden space is larger than that for bush limas. Many persons prefer the flavor of pole lima beans to the bush varieties.

A pkt. of seed will plant 10 poles; 1 lb., 50 poles. Small plantings may be made along a fence or trellis, putting several beans 1 ft. apart, later thinning to one strong plant; such plantings would require 1 lb. of seed to about 50 ft. of row; a pkt. will plant about 10 ft.

### Legume Aid

Better blooms and increased yield results when you apply Legume Aid to peas, beans, soy beans, sweet peas, etc. Treating seeds of legumes before planting causes nodules to develop on the roots. These nodules gather nitrogen from the air and convert it into plant food.

# BEETS

*Burpee's  
Red Ball*

*Burpee Redhart  
Beets*

*Detroit  
Dark Red*

Beets are easily grown and are delicious as baby beets when roots are half grown, or they may be used from then on until they reach their full size. Tops are highly palatable when cooked as "greens" or young beets with their tops may be cooked together. Burpee's Red Ball, Burpee's Redhart, Detroit Dark Red and Crosby's Egyptian are universally popular. A pkt. of seed will sow 25 ft. of row; one oz. 100 ft. How to grow directions are on every package.

## 6193 Burpee's Red Ball ⊙

*One of the darkest red beets of quality*

60 days. Outstanding for its tasty, sweet flavored, dark red flesh, free from woody fiber, and under good growing conditions shows hardly any lighter colored zones. Its intense, deep red color, well retained when beets are cooked, especially fits it for table use. Roots are of uniform globe shape, growing to 3 in. in diameter, with smooth, deep red skin and medium-small tap-root. Erect growing, medium tall red and green foliage tops. One of the best round red beets for table use, canning and freezing, especially where dark red flesh is important.

Pkt. 25¢; oz. 55¢; 1/4 lb. \$1.25; 1/2 lb. \$2.20; lb. \$3.50

60 days. Flesh is white, tender, firm, crisp, and sweeter than any red table beet we have ever tasted. Roots are white, top-shaped to nearly round, with a fairly heavy tap-root. Occasionally the roots have a slight pink tint on the shoulders. This coloring is only on the skin, and does not run into the interior. Tops are large and vigorous, of a shiny, medium green color. They are excellent "greens"—appetizing look; flavorful.

Pkt. 25¢; oz. 60¢; 1/4 lb. \$1.75

Roots are also slightly smaller and more globular. Skin is dark red; flesh is uniform deep red, always sweet and tender, with zones so faint that when the flesh is cooked, the zones are unnoticeable. Smaller tops are advantageous—allow beets to stand closer together in the row.

**Cabbage** is easily grown and may be eaten raw as cole slaw or cooked in different ways. While the smooth leaved varieties are the most popular, some prefer the green savoy crumpled leaved (Perfection Drumhead); others, the deep purplish red (Mammoth Red Rock); some, the round heads (Copenhagen Market); others, the Pointed (Early Jersey Wakefield) or flat (Premium Flat Dutch). We have the best kinds to meet your choice. Some of the mid-season and late varieties make excellent kraut; all the late varieties are desirable for fall use and winter storing.

A pkt. of seed will produce about 125 plants; oz. about 3000 plants. Days to maturity are from the time the plants are set in the garden; allow 30 days to produce plants from seed.

## BRUSSELS SPROUTS —Delicious flavor

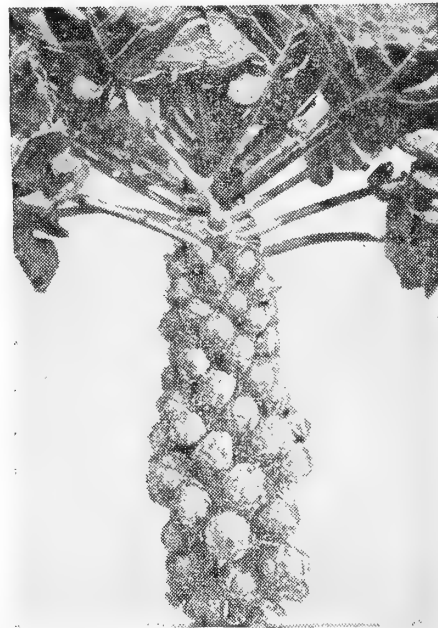

**6006 Long Island Improved** More delicate flavor than cabbage. Round, dark green, tightly folded, cabbage-like heads or "sprouts" 1 1/4 to 1 1/2 in. across. The "sprouts" appear along the central stalk at the joints of the leaves and appear first at the bottom of the plant. Therefore, the lowest sprouts on the plant should be picked each time, after which break off the leaves below the sprout to make further picking easier. Light frosts seem to improve the flavor. Do not remove the top leaves. Suitable for freezing. First "sprouts" are ready to use in about 90 days from the time plants are set in the garden. 20 in. tall. A pkt. of seed will produce about 250 plants; an oz. 3000.

Pkt. 25¢; 1/2 oz. 60¢; oz. \$1.00; 1/4 lb. \$2.90

# CAULIFLOWER

Use cauliflower as soon as heads fill out, otherwise they will lose in quality and break. Uncooked cauliflower is delicious, when head is broken up into small pieces, chilled and used as a relish with mayonnaise. Cooked cauliflower is a delectable dish; nice too, when used with cucumbers, onions, peppers, etc. in mustard chow-chow. Cauliflower is best grown as a fall crop in the greater part of the U.S.; A pkt. of seed will produce about 150 plants; 1 oz. 4000.

Days to maturity given in descriptions are from the time the plants are set out in the garden. These are average and will vary somewhat in different seasons and sections.

## CANTALOUPE (Muskmelons)

To really enjoy a cantaloupe, fruits should be allowed to fully ripen on the vine for, with the exception of Honey Dew, they do not become sweeter in flavor after being picked. Fruits are ripe when the stem, attached to the melon, will slip from it with a slight touch of the thumb. If the stem does not slip off easily, the melon is not ripe and should remain on the vine. Many persons can select ripe melons by their aroma. A pkt. of seed will plant 12 groups, 1 oz. 50 groups or so-called "hills."

# STANDARD YELLOW SWEET CORN

*Burpee's Golden Bantam  
Sweet Corn*

## SWEET CORN

Sweet corn loses flavor rapidly after picking. To enjoy it at its best, it should be home grown and eaten as soon as possible after ears are pulled. Take husks off promptly and if necessary to keep corn for a short time put the husked ears in transparent bags and keep at a 40 to 50° temperature until ready to use. Whether you grow yellow or white grained corn is a matter of preference as is the selection of hybrids or open pollinated, the so-called standard varieties. It is not advisable to save seed from plantings of any hybrids because there will be a reduction in yield the next year.

A pkt. of seed will plant 4 rows, each about 25 ft. in length; 1 lb. will plant 300 groups or "hills."

# Burpee Hybrid Cucumber®

TRUE FIRST GENERATION (F<sub>1</sub>) HYBRID  
CREATED ON BURPEE'S FORDHOOK SEED FARMS

**6023** 60 days. **Burpee Hybrid** is a high-class cucumber for all gardeners and all purposes. High resistance to mosaic and downy mildew are the outstanding attributes of this true, first generation (F<sub>1</sub>) hybrid, white spine, slicing type cucumber. In addition, the yielding ability of the hybrid has been greatly increased over the open pollinated varieties. Vines are extremely vigorous, long lived and bear an abundance of well formed, straight, dark green fruits of handsome appearance. They will grow 8 in. and more long, 2½ in. wide, square at both ends with medium seed cavity and crispy, white flesh of excellent quality.

Burpee Hybrid is one variety that should be planted early—as soon as possible after the soil is thoroughly warm. And, don't think you have to give up growing cucumbers if your garden is very small. Cucumbers are natural climbers and may be grown on a fence or trellis. You will be surprised at the number of fruits the Burpee Hybrid will produce.

**Pkt.** (30 seeds) 35¢; **2 pkts.** 65¢; **3 pkts.** 90¢; ¼ oz. \$1.50;  
½ oz. \$2.75; oz. \$4.75

**NOTE:** Care should be used in picking cucumbers so as not to injure the vines. Do not yank or pull them off the plant; fruits should be cut from the plants with a small part of the stem attached to the cucumber after it is removed from the vine.

Cucumbers may be harvested at almost any age depending on what purpose the fruits are intended. Different sizes may be picked at the same time, small ones for sweet pickles, larger ones for bread and butter pickles, slicing or dill pickles. Many gardeners prefer to plant the larger fruited varieties for table use and the so-called pickling types and gherkins for relishes or pickles. If you have had poor success with cucumbers, plant Burpee Hybrid. Letters from customers all over the country acclaim it as outstanding for yield, quality, color and disease resistance; many tell us we are too modest in our description. It is truly a top-notch.

**Burpee  
Seeds  
Grow**

Cucumbers, sliced unpeeled, make for a more attractive salad and it has been said that if you eat them with the skin on you may not be troubled with that after-taste which some persons experience.

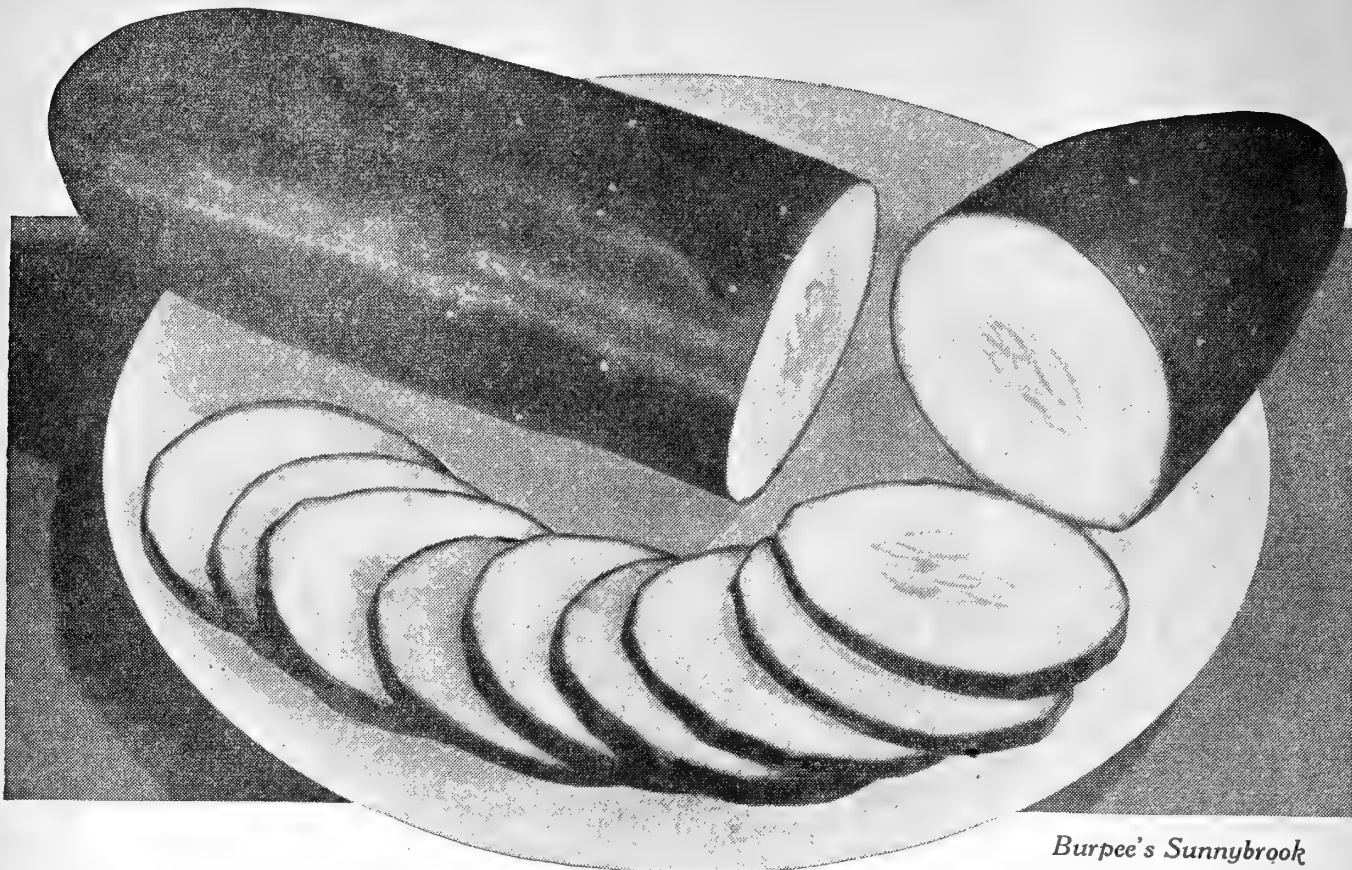

A pkt. of seed will plant 15 groups; 1 oz. 50 groups or so-called "hills." Seeds may also be sown in rows 4 to 5 ft. apart, 4 to 6 in. apart in the row; later thin the plants to stand 12 in. apart in the row.

*Burpee Hybrid Cucumber (foreground) has such high resistance to mosaic and downy mildew that it outyields the standard varieties (in background) because the vines continue to produce for a long time after others have ceased.*

#### Explanation of White Spine and Black Spine

Cucumbers are divided into two families, "White Spine" and "Black Spine." The spines are the miniature stickers that protrude from the warts when fruits are young. White spine cucumbers turn to a creamy white when old; black spine varieties turn to a yellowish orange when matured. Pickling cucumbers are black-spined; all others, with the exception of Improved Long Green, are white-spined.

## Greenleaf Vegetables For Winter Use

Greens and salads are highly beneficial to health as they are good sources of minerals and are also rich in vitamins. They are easily grown, very palatable, and may be had in a wide range of flavors from the piquant tang of endive to the mild taste of lettuce. Combinations of greens and salads are highly desirable and pleasing.

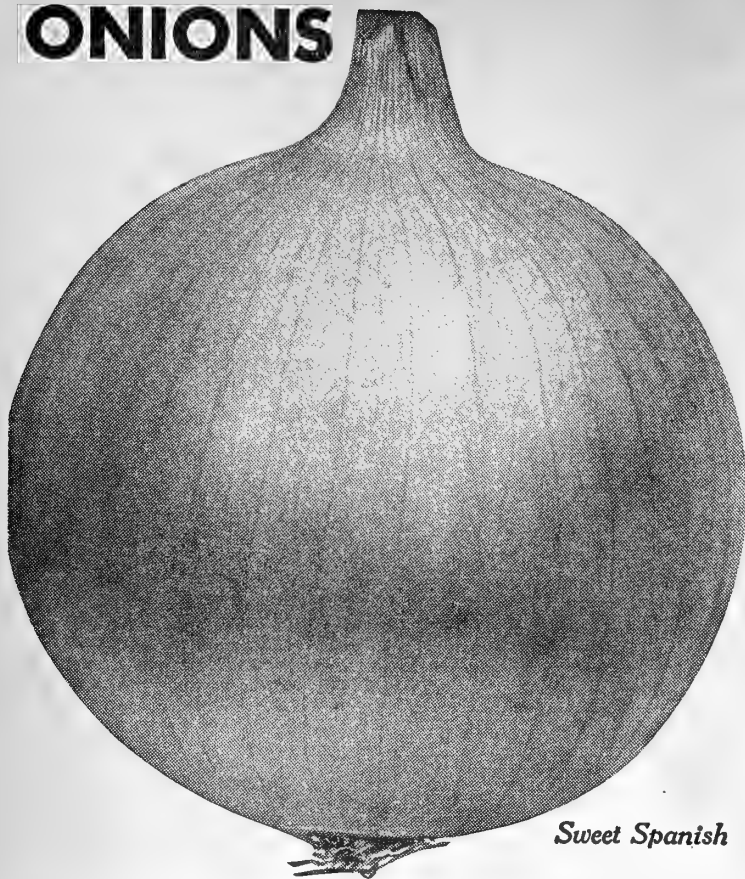

"Greens" grow best during the cool seasons of the year. In addition to spring plantings, you should plan to sow again in mid- or late summer for fall use or later where winters are not too severe.

**Lettuce**, the brittle, tender leaves of the crisp and loosehead types; **Endive**, the refreshing flavor of the curled or the tangy taste of the Batavian Escarolle; these are the universal favorites. Then, there is **Chinese Cabbage** with its delicate celery-lettuce flavor, and for many weeks after frost you can use the regular Cabbage. Burpee's sets are of the best quality, carefully screened and stored at the proper temperature until they are sent to you. They should be planted as early in the spring as the soil can be worked. Desirable for green or bunching onions quite early in the season. They will produce large onions if left to fully mature. One pound of onion sets will plant 50 ft. of row.

**6905 Yellow** These sets will mature into large, handsome, flattened, globe-shaped onions with yellowish brown skin and firm, yellowish white, mild flesh. Fully matured onions from yellow sets are reliable keepers for winter storing.  
Lb. 50¢; 2 lbs. 95¢; 5 lbs. \$2.25

**6906 White** Produce large, silvery white onions with fine grained flesh of mild and pleasing flavor. Excellent for pickling when small as well as green or bunching onions. Mature white onions will keep for some time in good condition.  
Lb. 55¢; 2 lbs. \$1.00; 5 lbs. \$2.45

A large selection of varieties from which to choose—round or flat in shape, mild or fairly strong in flavor, and white, yellow or red colored skin although the flesh of all is white. You may pull green onions as needed before the bulb enlarges or large onions after bulbs are formed. Fully matured onions may be kept for winter storing. Some varieties are better than others for this purpose as explained in the description. A pkt. of seed will sow about 20 ft. of row; 1 oz. 200 ft.

## EDIBLE-PODDED or SUGAR PEAS

THE PODS ARE COOKED AND EATEN LIKE SNAP BEANS

Sugar Peas possess the tenderness and fleshy podded qualities of a snap bean and the flavor and sweetness of fresh green peas. When young the pods are cooked like snap beans; the peas are not shelled. At this stage, pods are stringless, brittle, succulent and free of fiber or parchment. Should pods develop too fast for use as snap beans, seeds may be eaten as shelled peas and are of the best flavor before they have reached full size.

### 5184 Mammoth Melting Sugar ☉

## Three Extra Fine Radishes

**Burpee White** (the world's finest flavored radish)

**Cherry Belle** (quick growing round red)

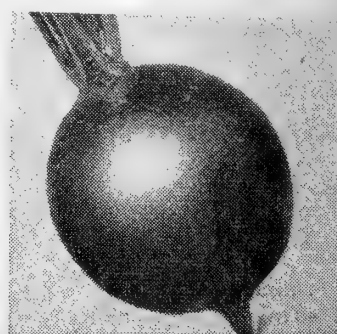

**Sparkler** (round scarlet-red with white base)

**6661 — SPECIAL:** One pkt. each of these 3 excellent radishes, value 60¢ for only **50¢**

**Radishes** do best in loose, deeply prepared soil and when growth is quick and steady. Sow seed of the earliest and mid-season varieties as early in the spring as soil can be worked. Length of tops, color of roots may vary with soil and growing conditions; shape of roots may also vary with soil, depth of planting and time of sowing. A pkt. of seed will sow about 20 ft. of row; 1 oz. 100 ft. When sowing beets, carrots, parsley and parsnips, mix in a few radish seeds to mark the rows where the slower-growing vegetables were sown. As the radishes are harvested it will tend to thin out the other crop. This is a good way to get the most out of a garden, especially when space is limited.

*Earliest Scarlet Button*

*Burpee's Rapid Red*

## RADISHES

## 6097 Burpee's Red Giant

Peppers are classed in two groups, the sweet or mild and the hot. The sweet fleshed peppers are desirable for slicing, salad and stuffing; they come in different forms—some blocky (Burpee's Fordhook), some heart-shaped (Burpee's Early Pimento), and another like a tomato in shape with a very mild flavor (Burpee's Sunnybrook). All are green at first changing to red when ripe, except Oshkosh, which turns to bright yellow.

Hot fleshed peppers vary in shape from those resembling a cherry to the extremely hot little tabascos and the long red cayenne. They are red when ripe. Fine for sauces, flavoring and pickling either fresh or dried.

A pkt. of seed will produce about 50 plants; 1 oz. 1500. Days mentioned in descriptions represent the average time required from the setting of the plants in the garden until the first fruits are ready for table use.

# SPINACH

One of our most wholesome "greens" in the spring and early fall when cool weather is most favorable for its growth. Also suitable for quick freezing and canning. New Zealand Spinach will supply delicious "greens" throughout the summer and fall. It withstands heat, as does Swiss Chard and Tampala. A pkt. of true spinach seed will sow 25 ft. of row; 1 oz. 75 ft.

*Bloomsdale  
Long Standing*

## 6093 Bloomsdale Long Standing ☉ — Vigorous plants

48 days. Heavy yielder of delicious "greens." The glossy dark green leaves are intensely crinkled, in addition to being of a very heavy texture. Valuable for spring or fall sowing. The rather erect plants remain in the rosette stage for a long time without bolting. Pkt. 15¢; oz. 35¢; ¼ lb. 90¢; ½ lb. \$1.45

## 6091 New Zealand ☉ — Everlasting spinach

70 days. Makes strong plants which resist heat and produce an abundance of fleshy, brittle green leaves and young stem tips that can be picked repeatedly all during the summer and fall. When prepared for the table, it so greatly resembles spinach in appearance and flavor that most persons will not be aware of the difference. Pkt. 20¢; oz. 40¢; ¼ lb. \$1.10; ½ lb. \$1.75

## 5054 Nobel — Giant thick, smooth leaved

49 days. *All-America Silver Medal Winner*. The largest as well as the heaviest producer of all, with thick, smooth, pointed green leaves that are quite succulent, crisp, tender and of extremely delicious flavor. Long standing. Pkt. 20¢; oz. 40¢; ¼ lb. \$1.10; ½ lb. \$1.75

## TAMPALA OR FORDHOOK SPINACH

**5341** Valuable "green" that stands hot weather. Within 6 to 8 weeks from sowing, Fordhook Spinach is ready to use when entire plants make the most delicious "greens" either raw as a salad or cooked like spinach. The young leaves are so tender they require only a few minutes to cook; stems may be cooked like asparagus, their flavor like artichokes.

As a cooked, canned or quickly frozen "green," Fordhook Spinach is, in the opinion of many, superior to regular spinach or Swiss Chard—more appetizing color, more delicious flavor, shrinks very little, holds its dark green color better and is easier to prepare for use fresh or frozen. Pkt. 25¢; ¼ oz. \$1.00; oz. \$3.00

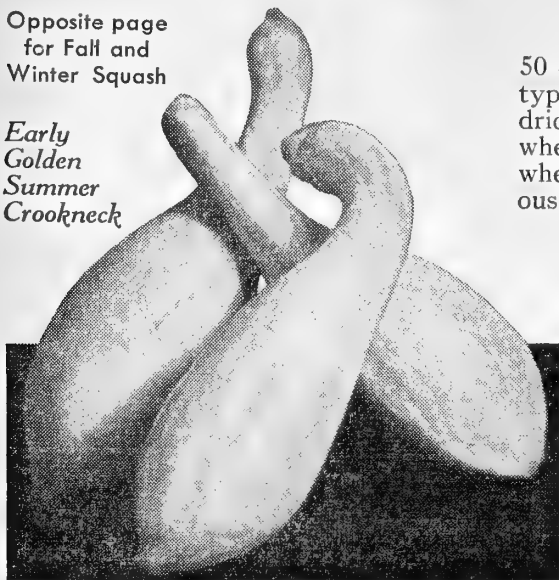

# Summer SQUASH

In descriptions we give the average size of fruits when fully grown. For the best eating, summer squashes are used while very young and tender; in fact, Early White and Crystal Bell are delicious if cooked whole when very tiny—an inch or more across. Generally speaking, a summer squash is too old for good eating when the thumb nail does not readily pierce the skin without pressure. Varieties of bush-like growth take up much less space in the garden than the running kinds and are especially adaptable for the small garden; Cocozelle and Zucchini are very popular bush types. A pkt. of seed will plant 8 to 10 groups; an oz. 30 to 40 groups or so-called "hills."

# Fall and Winter SQUASH

The fall and winter squashes produce hard-shelled fruits which may be stored for use during the winter. Valuable for baking, boiling, making pies, etc. Many of the varieties here listed make excellent "pumpkin" pie and some are canned extensively for that purpose. Unlike summer squashes, fruits of the fall and winter varieties must remain on the vine until fully matured; gather them before frost, leaving part of the stem attached to the fruit. Handle carefully and avoid bruising. Easily stored in any dry place. Keep best if temperature of 70 to 75° F. is maintained for a week or two after which it should be held at 45 to 50° F. A pkt. of seed will plant 6 to 8 groups, an oz. 20 to 30 groups or "hills."

**6115 Butternut** 85 days. Exceptionally meaty. Fruits are 10 to 12 in. long and 4 to 5 in. across; bottle shaped, smooth, dark buff colored skin and a hard shell. The flesh is orange, dry, fine textured, and of a sweet nutty flavor. Good keeper. Vines are quite resistant to squash borer as stems are so tough as to normally prevent the female from inserting her eggs into the stem.

Pkt. 20¢; oz. 50¢; ¼ lb. \$1.50

**6107 Buttercup** 105 days. Turban-shaped fruits 4½ in. thick and 6½ in. across; weigh 4 to 5 lbs., blossom end marked with a prominent "button." Skin is dark green, with silvery white stripes and spots of gray. Thick orange flesh, cooks dry and sweet; most pleasing, rich flavor. Good keeper. Distinctly different shape.

Pkt. 20¢; oz. 50¢; ¼ lb. \$1.50

**5315 Golden Delicious** 105 days. Top-shaped, medium-size fruits 11 in. long, 8 in. across, weighing about 7 lbs. each. Skin is reddish orange; the flesh is orange, sweet, thick and fine-grained. Highly desirable for canning and freezing on account of its moderately dry flesh. Reliable keeper.

Pkt. 20¢; oz. 50¢; ¼ lb. \$1.50

**5056 Blue Hubbard** 120 days. Attractive blue-gray, slightly ridged fruits which grow larger than the True Hubbard. The shell is rough and very hard, so keeping qualities are good; flesh is bright yellow-orange, fine-grained, dry and exceptionally sweet. Desirable for freezing. Squashes grow 15 to 18 in. long and 9 to 12 in. across; average weight 15 lbs. Fruits bulge at the middle, tapering sharply at each end; skin is slightly ridged.

Pkt. 20¢; oz. 50¢; ¼ lb. \$1.50

## 6105 True Hubbard 85 days—Excellent quality

115 days. The popular winter squash for all purposes, especially for winter use, for if properly stored, will keep until spring. We offer our own improved strain; it represents the perfection of winter squashes for pies, baking, boiling, etc. Fairly large fruits with dark bronze-green warted skin, and attractive deep orange-yellow flesh which is fine grained, sweet and dry. The fruits will grow 12 in. long and 10 in. thick; weigh about 12 lbs.

Pkt. 20¢; oz. 50¢; ¼ lb. \$1.50

**Delicious**—Discontinued; we recommend True Hubbard.

**Red or Golden Hubbard**—Discontinued; we recommend Golden Delicious.

## SQUASH—Especially desirable for baking

### For Summer Use or Winter Storage

Fruits may be used before the skin hardens, but the quality of the fine grained, sweet flesh will be better if they are allowed to form a hard shell; splendid for winter storage.

## 6112 Burpee's Bush Table Queen 85 days (Acorn)

80 days. Fruits are similar in size, shape and color to those of the green fruited Table Queen vine variety, described below; the flesh is of better quality. Plants, however, are of semi-bush growth, produce just as many fruits per plant as the vine variety but take less space in the garden so may be planted closer. Excellent keeper. Developed on Fordhook Farms.

Pkt. 25¢; oz. 85¢; ¼ lb. \$2.25

**6108 Royal Acorn** 82 days. A family-size Table Queen, with acorn-shaped fruits, 7½ in. long, 6 in. across, dull-dark green in color, turning dull orange after a period of storage. Flesh is fine flavored, up to 1½ in. thick, dry and sweet, with baking quality as good as Table Queen. Fruits may be used for boiling when immature, but for the best quality they should be allowed to fully develop. Good keepers.

Pkt. 20¢; oz. 50¢; ¼ lb. \$1.50

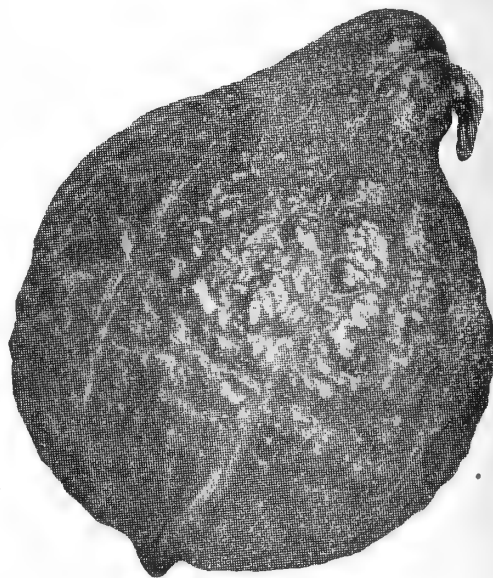

**5057 Table Queen Vine** 85 days. Also known as Acorn and Des Moines. Acorn-shaped, 5 in. long and 4 in. thick; deeply ribbed, dark green skin and thick orange flesh that cooks dry and sweet. Baked halves are popular for individual servings. Good keepers. Extremely productive.

## HYBRID TOMATOES

Hybrid Tomatoes are strong, vigorous growers and have the ability to outyield regular varieties, the extra quantities coming, in large measure, from the soil. It can be readily understood that because Hybrid Tomatoes can produce larger plants and higher yields they must be fed more than standard tomatoes. Tests have shown that hybrid tomato seedlings started in 4 in. pots or 4 x 4 in. bands, produced earlier and heavier yields than those started in 2½ in. pots or 2 x 2 in. bands when transplanted to the garden. To produce a maximum crop of large fruits, we recommend that you maintain good fertility and moisture in your soil. For this purpose, it is desirable to make your fertilizer application at the time of transplanting and, if possible, cover the ground around the plants with well-rotted manure when plants begin to bloom. Water during dry spells.

Each seed of an F<sub>1</sub> Hybrid Tomato and other F<sub>1</sub> hybrid vegetables is produced by carefully controlled crossing by hand of two distinct parent lines. This requires a great deal of work and entails a heavy expense but the resulting seed will produce a hybrid of extreme vigor, more uniform in growth, with bigger yields and better quality. We strongly urge that special care and attention be given to the sowing of the seed and the growing of the crop. Extra care will pay.

## Discontinued varieties of Large Red Tomatoes

**Break O'Day**—We recommend Grothen's Globe.

**Greater Baltimore**—We recommend Burpee's Matchless.

**John Baer**—We recommend Bonny Best.

For years it has been customary to refer to the following varieties as pink fruited; the only difference between a red tomato and a pink tomato is the skin color. Red tomatoes have a yellowish skin while the pink has a transparent skin. They are usually milder and more delicate in flavor than red fruited tomatoes. The meat of large pink tomatoes is fleshy and contains few seeds.

### 5323 Burpee's Globe —Extra choice

80 days. All-America Silver Medal Winner. Where a main-crop pink tomato of solidity and quality, with high yielding ability, is desired, plant Burpee's Globe. Uniform, medium to large, rich pinkish red, globe-shaped, smooth tomatoes in clusters of 6 to 10; interior is firm, meaty, and free from any core. Contain little or no acid; a shy seeder, the seed cavities being full of solid meat.

Pkt. 25¢; 1/2 oz. 75¢; oz. \$1.35; 1/4 lb. \$3.85

### 5324 Oxheart—Extra large, deep fruits

86 days. Noted for its delicious and appealing flavor. One of the largest pink tomatoes ever introduced; often weigh 1 lb. and more. The oxheart shape of the pinkish red fruits is most distinct; interior is extremely solid with thick, firm walls and small cavities with few seeds.

Pkt. 25¢; 1/2 oz. 75¢; oz. \$1.35; 1/4 lb. \$3.85

### 5334 Ponderosa—Immense fruits

83 days. It is not unusual for the purplish pink, deep, somewhat flattened fruits to weigh 24 ozs. and more, though the average runs around 9 ozs. The seed cavities are remarkably small, which accounts for the solid, luscious flesh of a delightful mild flavor. Though the fruits are immense, they are of fine quality, tasty and palatable.

Pkt. 25¢; 1/2 oz. 75¢; oz. \$1.35; 1/4 lb. \$3.85

## Large Pink TOMATOES

*Oxheart  
Pinkish Red  
Tomato*

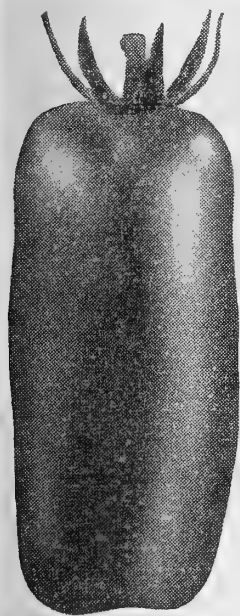

### Sizes and Weights of Tomatoes

given in our descriptions are for the general field-run of fruits. Customers often write us that they have produced tomatoes bigger than we state they will grow. This is not surprising for with special care, proper fertilizing, watering, pruning, staking, etc., they may easily do better than we claim. This might readily apply to other vegetables.

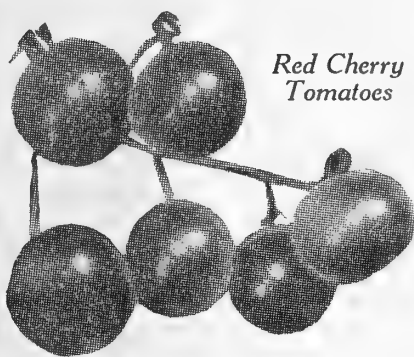

Tomatoes belong in every garden—they are easily grown and produce quantities of fruit for the space occupied. Picked when sun ripened, they have a flavor unequalled by any you may buy. As they can be served in so many different ways, one never seems to tire of them.

A pkt. of standard tomato seeds will produce about 100 plants; one oz. 5000 to 6000.

# Burpee's Hardy Garden Lily Bulbs

Easy to grow in any good, well-drained garden loam to which has been added a generous quantity of leaf mold. Once established, they will increase in beauty each year. Most all lilies delight in a sunny location, but it is advisable to mulch so that the hot sun does not reach the soil around the base of the plant. All varieties offered are highly decorative in the border, while the dwarfier ones also give a charming touch of beauty to the rock garden. Lily bulbs differ greatly in size according to variety—some 1 in. across, others 3 in. or more; we supply the sizes which will give the best results. We do not recommend Hardy Lily bulbs for house culture. How-to-grow directions are sent with the bulbs.

## 7261 Gloriosa Lily LILY ROTHSCHILDIANA

A most unusual and fascinating garden lily in that it will climb if it has something nearby to which it may attach itself. Leaves are elongated, soft green with curling tendrils on the tips with which they cling to a fence, trellis, string or wire.

Lily Rothschildiana is exotic in color and shape. The petals are sharply recurved, brilliant red bordered golden yellow—a striking bicolor contrast, the red becoming darker as flowers age. Planted in full sun, the colorings are more brilliant but plants become stockier, shorter and the stems of less length. Blooms have remarkable keeping qualities so make wonderful cut flowers. They also make attractive pot plants.

Roots are entirely unlike any of the other lilies—they do not have scales but are somewhat like a small dahlia tuber, 4 to 6 in. long and a trifle thicker than a lead pencil. Plant in a horizontal position, 4 to 5 in. deep in full sun or semi-shade. They do best in a sandy soil, preferably on the acid side; it is essential that any soil in which tubers are planted be well drained. Not hardy except in frost-free sections.

This unique and interesting lily is a species discovered in East Africa. Early records show it was grown on the estate of the Hon. Walter Rothschild of England, for whom it was named. \$1.25 each; 3 for \$3.50; 6 for \$6.50; 12 for \$12.50

They grow most freely, require little care after planting, and bring forth a wealth of blooms, rewarding the grower with a generous supply of gorgeous cut flowers during the late summer and fall. Plants are of stocky growth, quite branching and extremely free flowering. Nice for borders; invaluable for table decoration, as they keep in good condition for a long while after cutting.

# Burpee's Lawn Grass Seed

SHIPPED PREPAID ANYWHERE IN THE U. S.

The best time to start your lawn, or to repair it, is during the cool weather of early spring or in early fall. The weather at these times is favorable for the development of domestic grass but unfavorable for most weeds and wild annual grasses. Why not plan now to have a luxuriant lawn that will add to the beauty of your home?

The Burpee leaflet, "GN 43 Construction and Maintenance of the Lawn," will be sent free upon your request. For new lawns, sow 1 lb. of grass seed to 200 sq. ft. of space; use 100 to 150 lbs. per acre. 1 lb. MERION Kentucky Bluegrass is enough for 500 to 750 sq. ft. To improve old lawns, use half of these quantities.

## GARDEN SUPPLIES

Plant Foods, Insecticides, Fungicides, etc., are listed on pages 120 to 123.

# Burpeeana Early Asters

*All created on Burpee's Floradale Farms*

**Burpeeana Asters** are particularly noteworthy because of their desirable, uniformly upright, compact habit of growth; also because they come into bloom extremely early—the earliest of all.

In our plantings, they reached the peak of their bloom two weeks or more earlier than Queen of the Market, with larger and better shaped flowers and longer, stronger stems. Unexcelled.

Flowers are globular, double, 3 to 4 in. across, with attractively incurved petals. Ideally suited for cutting and garden purposes.

4014 BLUE BOY, dark blue

4025 ROSY MORN, light rose

4024 SNOW BALL, pure white

4034 FIRE LIGHT, scarlet-rose

4035 BLUE SKY, lavender-blue

*Other Asters, pages 11, 12 and 13*

Burpeeana Early Aster plants are of erect, base branching growth (see picture below), average 20 in. in height, with many stems per plant. Each stem is unusually strong and topped with a flower of splendid form and substance. These terminal flowers come into bloom at about the same time, thus making a grand showing in the garden. The sturdy, upright plants permit close planting so that more can be grown in a given area.
